## **Welcome to Advanced Radiation Physics consulting,**

Very big news:

We expanded our interests and expertise adding Medical Physics duties in addition to Medical Physics review courses.

Not only that we teach physics and medical physics but we've trained a group of physicists such that we can offer remote services for all the radiation oncology centers' needs.

We work in ARIA as well as in Mosaiq.

We commission and run acceptance testing. We also offer Annual, Monthly and Weekly QAs for all types for linear accelerators and scanning machines.

Our review courses got even better being tailored to support the new types of tests. The tests become more and more difficult and the long time required to prepare for them is hard to find when everyone is studying and/or working full time. Our courses will help you get organized and effectively study. This will not replace your hard work but it will be a very good study guide filled with attitude tips and studying techniques. The need of becoming certified is imperative. Our group of ABR certified Medical Physicists will support you to become DABR and will help any Cancer Center with high quality remote Dosimetry, New plan verifications and more.

At the same time we perform shielding calculations, surveys and documentation for state approval before the construction is started and after the accelerator is installed.

**Silvia Pella, PhD, DABR and Andreas Kyriacou, PhD, DABR**

**President and Vice-president of Advanced Radiation Physics Inc.**
